

Wart removing balm

VERRUPAN

Composition

Cedar tincture.....	15g
Salicylic acid.....	3g
Lactic acid.....	3g
Excipient (to make up a quantity of).....	100g

This product is intended only for external use and is used in local applications.

Therapeutic indications

Flat, skin warts and other forms of atypical verrucous lesions, Local hyperkeratosis

Usual dosage

Two to three applications a day. In the evening, before the last application, wipe off any residue from previous applications, either by lightly scraping, or with a cotton bud soaked in a little alcohol. It is important during this procedure to make sure the wart does not bleed, which could lead to spreading.

The treatment can perfectly well be continued for several weeks or even months

Each bottle contains 3g of balm.

Particular storage precautions

This product is very volatile and inflammable, it is necessary to keep it away from all sources of heat or flames.

Contra indications and side effects

Some rare cases of hypersensitivity to salicylics and/or to camphor derivatives

Particular precautions for use

As this product is volatile, it is important to leave the bottle open for the minimum time necessary for the application and to close the bottle top tightly after use.

Do not use on healthy skin.
